

V-PLEX Serology Panels for SARS-CoV-2 Variants

V-PLEX® Serology Panels are now available for more than 35 SARS-CoV-2 variants, including the Alpha, Beta, Gamma, Delta, Lambda, Mu, and Omicron variants. These tests supplement MSD's V-PLEX SARS-CoV-2 Panel 2, which was chosen by Operation Warp Speed (OWS) as the basis of its standard binding assays for immunogenicity assessments in all funded Phase III clinical trials of vaccines.

Kits are available for use with human and mouse samples. All human V-PLEX Serology Panels are provided as complete kits, including the same reference standards and controls used in OWS laboratories to analyze clinical trial samples. The Reference Standard 1 in human V-PLEX Serology kits is calibrated against the WHO International Standard (NIBSC code: 20/136).

Human kits are available in 96- and 384-well formats for quantitative serological testing and functional testing (ACE2 blocking). Mouse kits are available in 96-well format for qualitative serological testing.
